

A single end to end DevSecOps platform that provides governance and actionable insight based on built-in analytics across the entire product

Comprehensive Enterprise DevSecOps governance solution that helps accelerate transformation while maintaining support and integrations for open source products and traditional project delivery methods

Provides high quality enterprise DevSecOps metrics to assure application delivery visibility, control, insight, security, and compliance

No dependency on 3rd party or open source components for core DevSecOps functionality - from ideation through business value delivery

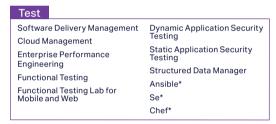

Enterprise DevSecOps for Speed to Capability

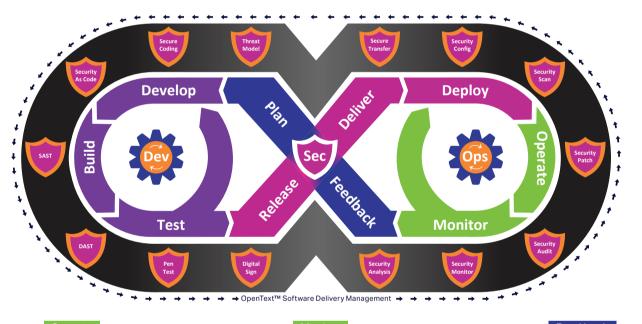

Your single vendor for a comprehensive, end-to-end OpenText™ governance solution for DevSecOps. Our architecture interoperates with common open source and third-party DevOps tools (indicated with an *).
